Amendments to the Claims:

This listing of the claims will replace all prior versions and listings of claims in the application:

Listing of Claims

1. (Withdrawn): An assay for determining the level of prostacyclin in plasma comprising:

(1) providing a plasma sample;

(2) incubating the plasma sample with an effective amount of an anti-6-keto- $PGF_{1\alpha}$ primary antibody, a secondary antibody and 6-keto- $PGF_{1\alpha}$ -aequorin conjugate;

(2) removing any unbound primary antibody and 6-keto- $PGF_{1\alpha}$ -aequorin conjugate from the plasma sample following incubation; and

(3) measuring and correlating light intensity of the plasma sample with amount of prostacyclin within the plasma sample.

2. (Withdrawn): The assay of claim 1 wherein the secondary antibody is coated onto a surface which is exposed to the plasma, primary antibody and 6-keto- $PGF_{1\alpha}$ -aequorin conjugate.

3. (Withdrawn): The assay of claim 1 wherein the 6-keto- $PGF_{1\alpha}$ -aequorin conjugate is a cysteine-free mutant of aequorin.

4. (Withdrawn): The assay of claim 1 wherein the plasma sample is obtained from a patient receiving intravenous prostaglandin therapy.

5. (Withdrawn): The assay of claim 1 wherein the concentration of 6-keto- $PGF_{1\alpha\alpha}$ -aequorin conjugate in the assay is about 1×10^{-10} M.

6. (Currently amended) A kit for measuring ~~amount of~~ prostacyclin in plasma comprising:

(1) a 6-keto- $PGF_{1\alpha}$ -aequorin conjugate; wherein said conjugate comprises a cysteine-free aequorin mutant;

wherein said cysteine free aequorin mutant comprises a unique cysteine residue introduced at amino acid positions 69, 70, 74 or 76, and

wherein the 6-keto- $PGF_{1\alpha}$ binds to the sulfhydryl group of the cysteine

(2) an anti-6-keto- $PGF_{1\alpha}$ primary antibody; and

(3) a secondary anti-6-keto- $PGF_{1\alpha}$ immunoglobulin antibody that binds to the primary antibody.

7. (Cancelled).

8. (Withdrawn): A method of determining an appropriate dose of prostaglandin for the treatment of primary pulmonary hypertension in a patient comprising

(1) providing a plasma sample from the patient;

(2) incubating the plasma sample with an effective amount of anti-6-keto- $PGF_{1\alpha}$ primary antibody, a secondary antibody, a 6-keto- $PGF_{1\alpha}$ -aequorin conjugate;

(3) removing any unbound primary antibody and conjugate from the plasma sample following incubation;

(4) measuring and correlating amount of detected 6-keto- $PGF_{1\alpha}$ with the appropriate dosage of prostaglandin for the patient.

9. (Withdrawn): The method of claim 8 wherein the secondary antibody is coated onto a surface which is exposed to the plasma, primary antibody and 6-keto- $PGF_{1\alpha}$ -aequorin conjugate.

10. (Withdrawn): The method of claim 8 wherein the 6-keto- $PGF_{1\alpha}$ conjugate is a cysteine-free aequorin mutant.

11. (Withdrawn): The assay of claim 8 wherein the plasma sample is obtained from a patient receiving intravenous prostaglandin therapy.

12. (Withdrawn): The assay of claim 8 wherein the concentration of 6-keto- $PGF_{1\alpha}$ - aequorin conjugate in the assay is about 1×10^{-10} M.

13. (Withdrawn): An assay for determining the level of a biomolecule in plasma comprising:

(1) providing a plasma sample;

(2) incubating the plasma sample with an effective amount of a primary antibody to the biomolecule, a secondary antibody to the biomolecule and biomolecule-aequorin conjugate;

(2) removing any unbound primary antibody and biomolecule-aequorin conjugate from the plasma sample following incubation; and

(3) measuring and correlating light intensity of the plasma sample with amount of biomolecule within the plasma sample.

14. (Withdrawn): The assay of claim 13 wherein the secondary antibody is coated onto a surface which is exposed to the plasma, primary antibody and biomolecule-aequorin conjugate.

15. (Withdrawn): The assay of claim 13 wherein the biomolecule-aequorin conjugate comprises a cysteine-free mutant of aequorin.

16. (Withdrawn): The assay of claim 15 wherein the biomolecule-aequorin conjugate comprises a cysteine-free mutant of aequorin having a unique cysteine introduced at amino acid position 69, 70, 74, 76 5, 53, 71 or 84 and wherein the biomolecule is bound to the sulfhydryl group of the unique cysteine.

17. (Withdrawn): A biomolecule-aequorin conjugate comprising a cysteine-free aequorin mutant having a unique cysteine residue introduced at amino acid 69, 70, 74 or 76, wherein the biomolecule is bound to the sulfhydryl group of the cysteine.

18. (Withdrawn): The biomolecule-aequorin conjugate of claim 17 wherein the biomolecule is 6-keto-prostaglandin$_{1\alpha}$.

19. (Withdrawn): The biomolecule aequorin conjugate of claim 17 wherein the biomolecule is a peptide.

20. (Withdrawn): A method for determining the effect of a therapeutic agent on the level of prostacyclin in the plasma of a patient comprising

(1) administering the therapeutic agent to the patient;

(2) obtaining a plasma sample from the patient;

(3) incubating the plasma sample with an effective amount of an anti-6-keto- PGF$_{1\alpha}$ primary antibody, a secondary PGF$_{1\alpha}$ antibody and 6-keto- PGF$_{1\alpha}$ -aequorin conjugate;

(4) removing any unbound primary antibody and 6-keto- PGF$_{1\alpha}$ -aequorin conjugate from the plasma sample following incubation; and

(5) measuring and correlating light intensity of the plasma sample with amount of prostacylin within the plasma sample.

21. (Cancelled).
